Social distancing in cafes and general eating areas – reducing the transmission of COVID-19

What is social distancing
Social distancing includes ways to stop or slow the spread of infectious diseases. It means less contact between you and other people.

Why is it important?
Social distancing is important because COVID-19 is most likely to spread from person-to-person through:

- direct close contact with a person while they are infectious or in the 24 hours before their symptoms appeared
- close contact with a person with a confirmed infection who coughs or sneezes, or
- touching objects or surfaces (such as door handles or tables) contaminated from a cough or sneeze from a person with a confirmed infection, and then touching your mouth or face.

So, the more space between you and others, the harder it is for the virus to spread.

What you should do?
If you are sick, stay away from others and stay at home – that is the most important thing you can do.

You should also practise good hand and sneeze/cough hygiene:

- wash your hands frequently with soap and water, or use alcohol-based hand sanitiser, before and after eating, after going to the toilet and after sharing items.
- cover your cough and sneeze, dispose of tissues, and wash your hands with soap and water or use alcohol-based hand sanitiser, and
- avoid close contact with others (i.e. stay more than 1.5 metres away from people).

As well as these, you can start a range of social distancing and hygiene actions now.

These simple, common sense actions help reduce risk to you and to others. They will help to slow the spread of disease in the community – and you can use them every day.

Principles social distancing while attending cafes and general eating areas:

- Firstly - Stay at home if you are sick
- Practise reasonable social distancing which, in this case, means avoiding unnecessary close contact with others attempting to keep a distance of at least 1.5 metres between people when you are on university sites.
- Reduce other opportunities for direct transmission e.g. sharing items, unnecessary touching.
- Ensure impeccable personal hygiene practices.
Recommendations / Actions

1. Most importantly, stay home if you feel ill.
2. Consider spacing within the physical environment. Maintain 1.5 meters between you and others. This may mean that you keep a spare space or seat between you and the next person or avoid sitting directly opposite someone at a table.
3. Take your food and/or drink outside rather than in the communal eating areas. Enjoy your lunch outside!
4. Avoid sharing equipment as the virus can live on surfaces including table tops, utensils, etc.
5. Limit food handling and the sharing of food.
6. Avoid cash handling as much as possible - Use tap and pay.
7. Try not to take straws or utensils from the communal area – bring your own if possible.
8. Attempt to stagger when you buy food or beverages – wait until quieter times rather than peak periods.
9. Regularly wash your hands before and after eating and after going to the toilet as a minimum.
10. Avoid queuing at coffee shops or food outlets – use the apps to pre-order.
11. If you do queue, try to keep your distance from the person in front and behind you.
12. Dispose of tissues and rubbish immediately in the general waste bin, don't leave rubbish on tables.
13. Stop the practice of handshaking as a greeting.
14. Avoid touching your face with your fingers.
15. Have good hand and sneeze/cough hygiene and use hand sanitisers and soap and water often.
